Re: City of Avondale LED Streetlight Conversion- Notification of Construction

Dear The Sanctuary at Avondale HOA,

On Nov. 20, 2017, the Avondale City Council approved a proposal for a city wide conversion from the existing High-Pressure Sodium (HPS) streetlights, to Light-Emitting Diodes, or LED's. Transitioning to LED streetlights has several direct benefits to the City of Avondale, which include reduced annual operating and maintenance expenses, increased nighttime visibility to promote a safer community, and an approximate 50% reduction in energy use which aligns with the city's sustainability goals.

You are receiving this correspondence because the project is moving forward to the construction phase. On or about January, 22 2018, crews working on behalf of the City will begin changing out the HPS fixtures on every city owned and maintain streetlight pole, and replacing them with the new LED fixtures. The crews will be present for approximately 20 minutes at each light pole. Work within residential areas will be completed during daylight working hours, whereas work occurring on larger 'arterial' streets (McDowell & Avondale Blvd) will occur overnight in order to avoid disrupting routine traffic.

Construction will generally occur in a quadrant fashion (using the Agua Fria and I 10 as dividers), and will begin in the Northwest corner of the city, moving through the South West quadrant, then the South East, and finally concluding in the North East. It is estimated that work will occur in each quadrant between for 20-25 days, and the project will be complete, barring unforeseen circumstances, by the beginning of May, 2018.

Project information will be update as progress occurs on the City's website [www.avondaleaz.gov](http://www.avondaleaz.gov).

If you have questions or would like additional information about the LED conversion project, please do not hesitate to contact me directly.

Thank you,  
Drew Bryck, Environmental & Sustainability Program Manager
